SARS-COV-2 (COVID-19) RNA DETECTION BY PCR (QUALITATIVE)

Sample: Nasopharyngeal/Oropharyngeal Swab

Result: SARS-COV-2 RNA (COVID-19) Detected.

Principle: This assay exploits the principle of real time fluorescence PCR/RT-PCR. The increase in fluorescence is directly proportional to specific target amplification during PCR.

Comments:

1. It is advisable not to compare results of this technique with others as results may vary among labs because of differences in PCR methods.
2. The lower detection limit of this assay is 0.003 [TCID₅₀/ML]*

*USA-WA1/2020 stock concentration 2.8E+05 TCID₅₀/ml

Electronically verified on 27-Nov-2020 11:15 PM No Signature required.
